logOn

- ☐ Secure AD credentials
- ☐ Simplify user experience
- ☐ Reduce IT management efforts

fido CERTIFIED — FIDO2

The problems with password

Password with hack risk

"81% of hacking-related breaches used with stolen or weak password."

— Verizon Data Breach Investigations Report

Employees

- Change password regularly (56%)
- Typing long, complex passwords (49%)
- Typing a password for every application (49%)
- Not having a secure way to manage passwords (30%)

Waste IT resources

- Users just forgetting their passwords (49%)
- Time spent on password management (45%)
- Users sharing credentials (40%)
- Lost or stolen employee credentials (32%)

A solution that the enterprise stays on-premise AD but demands Passwordless Security.

**Passwordless login joined domain PC**
