- ③ Login Account

## End-to-End Passkey Solution: Authenticator to Server

We offer various styles of **security keys** and **on-demand FIDO2 server** to assist enterprises in transferring into a secure and convenient digital environment. Making web services FIDO enabled can be done in just a few hours, disregarding **internal workforce identity** nor **external customer identity**. Our **FIDO2 server solution - AT.AuthFi** can be in public, private, or on-premise, depending on the customer's needs. Customer can sign up an account for AT.AuthFi free trial now!

### AUTHFi deployment in 4 steps:

-  1 Register an account online with email
-  2 Add on your service (relying party) URL
-  3 Integrate API with open source docs & sample codes for web or App
-  4 Done! Your user can start login with Passkeys

## Use Cases

 Internal Workforce Identity

 External Customer Identity

### ATKey Provisioning

With the ATKey provisioning tool, admins can pre-register ATKeys for users' accounts, making the user onboarding process frictionless.

### Windows MFA

MFA tool **ATKey.Login** enhances the safety and convenience of the login step on Windows PCs and is compatible with a wide range of environments.

### Fingerprint Smart Card

Fingerprint verification is possible for Smart Card users now, replacing the traditional PIN-based verification method, adding a layer of protection.

### Mac MFA With jamf

Login Mac with fingerprint Smart Card is possible with ATKey for Mac users, extending the passwordless journey from web accounts to devices.

### Web APP Authentication
